

Suggested Adult Triage Process for Community Practices

March 27, 2020

It is imperative that we continue to provide necessary care for patients in our community in the most appropriate setting. This algorithm was developed based upon CDC guidelines, with input from the Infection Prevention Team at ChristianaCare. It will be updated and reposted on the ChristianaCare website, as conditions and clinical recommendations change.

- Our Emergency Departments will need to maintain adequate capacity to care for COVID patients with severe illness.
- Patients at risk or diagnosed with COVID who are stable, should be managed at home. Do not send these patients to the Emergency Department.
